Note: There are three variants of this subsystem.

- RLB-10 for Jubilee
 - use an LDO motor
- RLB-10S for Jubilee
 - uses a StepperOnline motor
- RLB-09RC for the Railcore
 - uses an LDO motor

Each variant has a unique base plate. RLB-10S uses a unique base plate and motor clip. Make sure you've printed the parts that correspond to your motor.

With a set of Needle nose pliers, bend the terminal lug upwards about 90 degrees along this line.
Do this for both terminal lugs.

Solder together the following limit switch harness.
Optional: insulate the solder connections with heat-shrink tubing.

Note wire lengths with respect to switch buttons.
Note: the KK Connector is included in the Duet2 box.

The motor clip only attaches one way.

Evenly tighten these screw such that:you cannot twist the motor relative to the plate by hand

There will be a gap here on both sides. Ensure that it is even.

Push down on the fixed pulley while tightening the set screw.

B

Apply threadlock to the threads of this set screw; then fully tighten it into the flat part of the shaft.

After tightening, ensure that the set screw is actually fixed onto the flat part of the shaft.

Note: this is just a schematic representation. Join these parts loosely together on a flat table following the color coding.

Note: tape the spring guide to the table for ease of assembly.

Push each spring guide into the printed part until they hard-stop at about 10mm deep.

These two pieces can be sleeved together in a nylon sleeving, but leave at least 100mm exposed on the carriage side and 150mm exposed on the Lock side.

Push each Spring Guide into the hole until it hard-stops. Then apply two zip ties to secure each spring guide at the locking side..

ITEM NO	DESCRIPTION	QTY
1	1600 mm wire rope	1
2	Carriage Pulley Assembly	1
3	Spring Guide, 600mm long	2
4	Optional: Braided Cable Sleeving 350mm long	1

SHEET 15 OF 17

B

Loop the wire rope behind this screw at the halfway point and fully tighten the screw.

Tuck each loop of the wire rope into the closest hole.

Leave some slack on both sides of the carriage for the next step.
(Note: the latest version of this part is CPL-02.)

Pop the wires out of each exit hole here.
See the next page for cinching details.

SCALE: 1:2

SHEET 16 OF 17

Cinch both wire rope ends down very lightly (upper left image), just enough such that the wire rope cannot pop out. The location of where they are cinched doesn't matter now as they will be properly located later.

Once the wires are cinched, you may optionally take in the slack until there is no more excess wire rope on the carriage side (left image), but do not put tension into either side of the rope. This setup makes it easier to install on the machine later.

(Note: The latest version of this part is CPL-02.)
