Install the following 4 inserts with the Plate Press Technique.

Be gentle installing these front heat set inserts as they can warp this corner of the plastic.

If you see this plastic warping, you can still push it back to it's original form while the plastic is still warm.

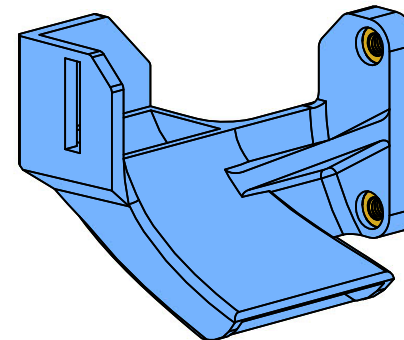

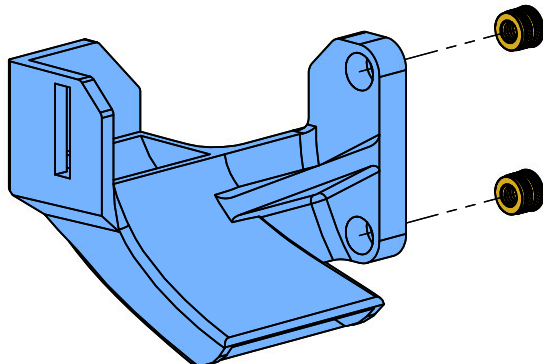

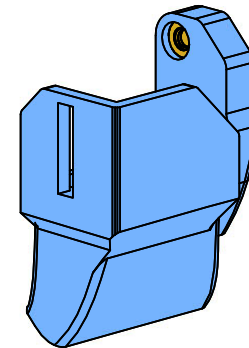

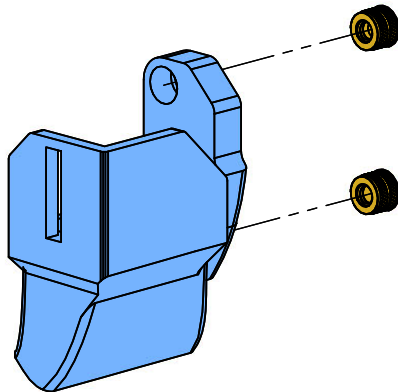

More inserts to install on the next page!

ITEM NO.	DESCRIPTION	QTY.
1	M3 Tapered Heat Set Insert	4
2	Front Base Piece Assembly	1

	SCALE: 1:1	SHEET 5 OF 14

Install the following inserts in the left and right fan shrouds.

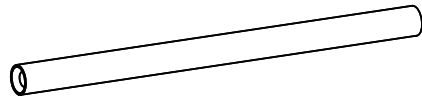

Be gentle as the heat from the installation tool can warp the flatness of the back surface of the part. If that happens, cool the part on a flat metal plate while applying gentle pressure to flatten it.

ITEM NO.	DESCRIPTION	QTY.
2	M3 Tapered Heat Set Insert	4
3	Left Fan Shroud	1
4	Right Fan Shroud	1

Use a PTFE Tube Cutter to cleanly cut the PTFE tube to the length appropriate for your hotend.

60.5 mm for E3DV6 hotends.
45 mm for E3D Revo6 hotends.

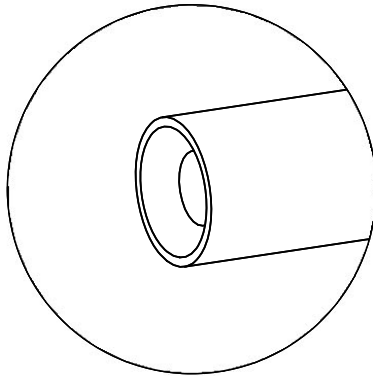

OK!

Not OK!

Ensure that the resulting cut is clean on both ends.

With a box cutter blade or chamfering tool, shape one end of the PTFE Tube.

Ensure that the PTFE Tube is clean on both ends and there is no debris anywhere in the tube or at the tips.

Warning: it is **absolutely critical** that the PTFE tube is cut cleanly and has **no debris**. Any small flakes of PTFE tube will result in horrific tool jams that are hard to debug

SCALE: 1:1

SHEET 7 OF 14

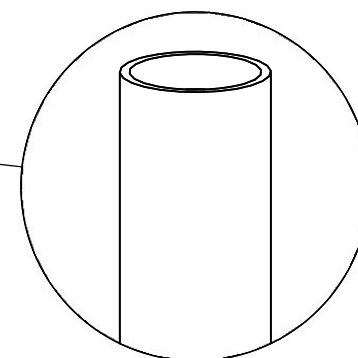

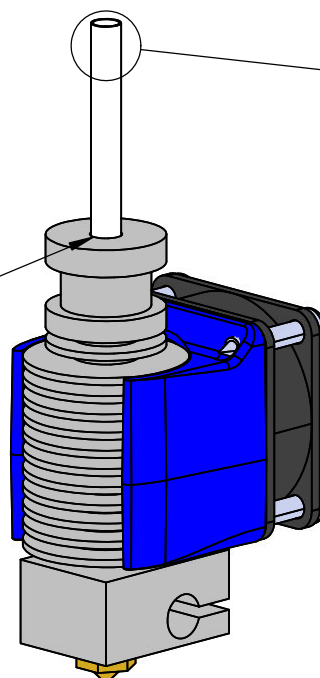

Put together an E3DV6 Assembly based on E3D's Assembly Guide.

Include the Heater and Thermistor, but not the PTFE Tube until the next step.

Install the PTFE tube such that the chamfered side sticks out. Push it down all the way until it hard-stops.

There should be a black ring here with a retainer clip. It is not modeled.
